IBM IBM certifications III

000-101: Virtualization Technical Support for AIX and Linux

Practice Exam: 000-101 Exams

Exam Number/Code: 000-101

Exam Name: Virtualization Technical Support for AIX and Linux

Questions and Answers: 96 Q&As

([IBM certifications III](#))

"Virtualization Technical Support for AIX and Linux", also known as 000-101 exam, is a IBM certification. With the complete collection of exam questions, Just4Study has assembled to take you through 96 Q&As to your 000-101 exam preparation. In the 000-101 exam resources, you will cover every field and category in IBM Certification helping to ready you for your successful IBM Certification.

Exam : [000-101](#)

The exam questions cover the latest real test and with all the correct answer. we promise the Q&A for IBM IBM certifications III 000-101 (Virtualization Technical Support for AIX and Linux) examination of original title complete coverage. 000-101 exam questions help you pass the exam.

Just4Study 000-101 Feature:

* High quality - High quality and valued for the 000-101 Exam: 100% Guarantee to Pass Your 000-101 exam and get your IBM certifications III certification.

* Authoritative - Authoritative braindumps with complete details about 000-101 exam.

* Cheaper - Our Just4Study products are cheaper than any other website. With our completed IBM certifications III resources, you will minimize your **IBM IBM certifications III** cost and be ready to pass your 000-101 exam on Your First Try, 100% Money Back Guarantee included!

* Free - Try free IBM certifications III demo before you decide to buy it in <http://www.Just4Study.com>.

Just4Study Guarantee:

Just4Study provides the most competitive quality of all exams for the customers, we guarantee your success at the first attempt with only our Certification Question&Answers, if you do not pass the 000-101 exam at the first time, we will not only arrange FULL REFUND for you, but also provide you another exam of your claim, ABSOLUTELY FREE!

Free 000-101 Demo Download

Just4Study offers free demo for IBM certifications III 000-101 exam (Virtualization Technical Support for AIX and Linux). You can check out the interface, question quality and usability of our practice exams before you decide to buy it. We are the only one site can offer demo for almost all products.

The Questions & Answers cover the latest real test and with all the correct answer.we promise the Q&A for **IBM IBM certifications III 000-101** examination of original title complete coverage.000-101 Questions & Answers help you pass the exam. Otherwise,we will give you a full refund.

VUE/Prometric Code: 000-101

Exam Name: Virtualization Technical Support for AIX and Linux(IBM certifications III)

Questions and Answers: 96 Q&A

[IBM 000-101](#) Test belongs to one of the IBM certifications III certified test, if needs to obtain the IBM certifications III certificate, you also need to participate in other related test, the details you may visit the [IBM certifications III](#) certified topic, in there, you will see all related IBM certifications III certified subject of examination.

Just4Study professional provide IBM certifications III 000-101 the newest Q&A, completely covers 000-101 test original topic. With our complete IBM certifications III resources, you will minimize your IBM certifications III cost and be ready to pass your 000-101 tests on Your First Try, 100% Money Back Guarantee included!

Just4Study Help You Pass Any IT Exam

[Just4Study.com](#) offers incredible career enhancing opportunities. We are a team of IT professionals that focus on providing our customers with the most up to date material for any IT certification exam. This material is so effective that we Guarantee you will pass the exam or your money back.

Exam : IBM 000-101

Title : Virtualization Technical Support for AIX and Linux

1. A company has a new Power 570. They will install 2 LPARs and 1 VIO server. All networking will be virtualized. Their application requires a large amount of bandwidth, and Link Aggregation on the VIO server will be utilized. They have 4 dual port gigabit Ethernet cards. The network infrastructure team has advised the implementation team that they are able to allocate 8 ports split between two switches, SwitchA and SwitchB.

How can Link Aggregation (LA) be configured for maximum possible bandwidth available for the LPARs?

- A. Configure 2 LA devices, each containing 2 ports from SwitchA and 2 ports from SwitchB, no backup interfaces.
- B. Configure 2 LA devices, each containing any 4 of the 8 available gigabit Ethernet interfaces and 1 backup interface.
- C. Configure 1 LA device with all 8 gigabit Ethernet interfaces split between the two switches, and no backup interface.
- D. Configure 2 LA devices, each containing 4 gigabit Ethernet interfaces connected to the same switch, no backup interfaces.

Answer: D

2. Which functionality would a customer use to share available CPU resources between AIX and Linux partitions on a Power system?

- A. Dynamic LPAR
- B. Micro Partitions
- C. Entitled capacity
- D. Multiple Shared Processor Pools

Answer: B

3. A customer has a requirement to provide VLAN tagging and a highly available network infrastructure for the logical partitions. A dual VIO server environment with Shared Ethernet Adapters (SEAs) is in place.

How can the customer support these requirements?

- A. Create a SEA failover infrastructure with each having a Virtual Ethernet with a unique PVID mapping to a Virtual Ethernet on the LPAR with unique PVID.
- B. Create a SEA failover infrastructure with each having a Virtual Ethernet with the same PVID mapping to a Virtual Ethernet on the LPAR with the same PVID.
- C. Create a Network Interface Backup (NIB) infrastructure with each SEA having a Virtual Ethernet with the same PVID mapped to a Virtual Ethernet with the corresponding PVID on the LPAR.
- D. Create a Network Interface Backup (NIB) infrastructure with each SEA having a Virtual Ethernet with a different PVID. Map one to a Virtual Ethernet with the corresponding PVID on the client LPAR.

Answer: B

4. Which of the following statements is true regarding virtual Ethernet redundancy?

- A. Specifying an IP Address to ping is optional with Network Interface Backup (NIB) and is optional with Shared

Ethernet Adapter (SEA) failover.

B. Specifying an IP Address to ping is optional with Network Interface Backup (NIB) and is required with Shared Ethernet Adapter (SEA) failover.

C. Specifying an IP Address to ping is required with Network Interface Backup (NIB) and is required with Shared Ethernet Adapter (SEA) Failover.

D. Specifying an IP Address to ping is required with Network Interface Backup (NIB) and is optional with Shared Ethernet Adapter (SEA) failover.

Answer: D

5. The system administrator for a company plans to consolidate the workload of several ageing servers onto a new Power server. The administrator's intention is to virtualize all network and disk resources for each LPAR in the new system using VIOS 1.x.

Which of the following is correct regarding MAC addresses and World Wide Port Names (WWPN) in a client partition?

A. Each client LPAR will have its own MAC address and WWPN.

B. Each client LPAR will have no unique MAC address or WWPN.

C. Each client LPAR will have its own MAC address, but no unique WWPN.

D. Each client LPAR will have no unique MAC address, but will have its own WWPN.

Answer: C

6. A customer is interested in server consolidation of their AIX and POWER Linux (SLES 10) environments and sees virtualization as an important component of this.

Which of the following options provides the required virtualization and optimizes the use of the hardware?

A. A VIO server can provide virtualization capabilities of network and disk for both AIX and Linux clients.

B. A VIO server partition with the PowerVM Lx86 for x86 installed can provide virtualization capabilities of network and disk for both AIX and Linux clients.

C. A VIO Server partition can provide virtualization of network and disk for AIX clients. A separate Linux partition can provide virtualization of network and disk to Linux clients.

D. A VIO Server can provide virtualization of network and disk for AIX clients. A separate Linux partition running PowerVM Lx86 for x86 can provide virtualization capabilities of network and disk to Linux clients.

Answer: A

7. Which of the following statements is true regarding implementing Live Partition Mobility on two existing POWER6 based systems?

A. The systems must use internal storage for boot purposes.

B. All virtualized ethernet adapters must be numbered below 10.

C. The mobile partition's network and disk access must be virtualized.

D. Each system must be controlled by a different Hardware Management Console (HMC).

Answer: C

8. An administrator has a Power 570 in default configuration with a 4 port 1 Gbps Integrated Virtual Ethernet (IVE) adapter. A new application requires that the MCS value for the first port group of the IVE adapter be set to 1.

If this change is made, what is the maximum number of logical ports, across both port groups, that the IVE adapter can provide?

A. 4

B. 16

C. 20

D. 32

Answer: C

9. A customer has 5 older POWER5 systems and they want to consolidate them onto a POWER6 system.

What information is important to analyze when deciding how to design the new machine using the System Planning Tool?

- A. vmstat and iostat data from the older machines
- B. The number of CPUs that were installed in the original machines
- C. Data from Workload Estimator (WLE) and IBM Performance Management (PM)
- D. Performance data that is collected from the new system after it has been put into production

Answer: C

10. Which of the following can be used to re-deploy a system configuration in a disaster recovery scenario?

- A. System plan
- B. System profile
- C. Critical console data
- D. VIO server partition profile

Answer: A
