Exam : Citrix 1Y0-326

Title : Citrix Password Manager 4.0 Administration

1. If multiple Password Manager administrators are using the console simultaneously, how does Password Manager ensure that changes are not lost?

- A. Password Manager restricts access to nodes already in use by other administrators.
- B. Password Manager console dynamically updates data as it changes. Administrators see the changes in real time.
- C. Password Manager uses an internal algorithm for conflict resolution. No further intervention is required by administrators.
- D. Password Manager generates a warning at save time if changes have occurred since the console was opened. Administrators are required to run discovery before saving.

Answer: D

2. Which type of object can have password policies assigned to it?

- A. Application Groups
- B. User Configurations
- C. Identity Verification Questions
- D. Multiple Question Authentication

Answer: A

3. When configuring a host application, how can the administrator configure the definition to submit an "Enter" before submitting credentials to the host?

- A. Type "@E" into the "Keys before" setting in the console
- B. Type "Enter" into the "Keys before" setting in the console
- C. Enable the "Use ENTER instead of TAB to move between fields on this form" setting in the console
- D. Disable the "Use ENTER instead of TAB to move between fields on this form" setting in the console

Answer: A

4. Which three components are required on the server running Password Manager for a successful implementation of the smart card software? (Choose three.)

- A. PC/SC software
- B. Citrix Presentation Server
- C. Microsoft Active Directory
- D. Smart card reader software drivers
- E. Cryptographic Service Provider software

Answer: ADE

5. The Password Manager console user configuration wizard provides the ability to assign _____ and _____ to the users. (Fill in the blanks with the two correct options).

- A. password policies
- B. application definitions
- C. identity verification questions
- D. multiple question authentication

Answer: AB

6. Scenario: In an organization, 15 laptops are used by the remote workforce for field work. Password Manager is installed and named user licensing is implemented on the laptops. One laptop is lost and its named user license is checked out.

What must be done to reclaim this license?

- A. Restart the license server.
- B. Wait until the disconnected mode expires and the license will be checked in automatically.
- C. Use the License Management Console license return function and select the hostname of the affected computer.
- D. Use the LMCONFIG -r command on the License server and provide the hostname of the affected computer as a parameter on the command line.

Answer: B

7. Which three tasks need to be completed to enable self-service password reset in an existing Password Manager deployment? (Choose three.)

- A. Enable multiple question authentication
- B. Enable self-service password reset in Logon Manager
- C. Enable the self-service password reset feature license
- D. Enable self-service password reset for each user configuration
- E. Redeploy the agent software with the self-service password reset feature enabled

Answer: ADE

8. Why should the Password Manager console be installed in the same location as the applications?

- A. To ensure that the AELIST.INI file is created
- B. To ensure that the APPLIST.INI file is created
- C. To eliminate the need to configure application definitions
- D. To eliminate inconsistencies that occur with application definitions due to operating system differences

Answer: D

9. Which three settings are available for smart card encryption with Password Manager? (Choose three.)

- A. PIN as password
- B. DPAPI with profile
- C. Store on smart card
- D. Smart Card Data Protect
- E. Integrated with Active Directory profile

Answer: ABD

10. If you wish to enable data integrity on a central store that has pre-existing data that has never been signed, you must _____ before you _____. (Fill in the blanks with the correct pair of options.)

- A. enable data integrity on the console; sign the data with the signing tool
- B. sign the data with the signing tool; enable data integrity on the console
- C. disable data integrity on the console; unsign the data with the signing tool
- D. unsign the data with the signing tool; enable data integrity on the console

Answer: B

11. What are two requirements for configuring cryptographic data integrity assurance? (Choose two.)

- A. SSL web server certificate
- B. Identity verification question

- C. MetaFrame Password Manager Service
- D. Reverse look-up for DNS name resolution

Answer: AC

12. When is it appropriate to disable the "Submit application credentials automatically" setting?

- A. When static passwords are used
- B. When no user interaction is required
- C. When dynamic passwords are used
- D. When working in an unsecure environment

Answer: C

13. When configuring a web application that requires advanced matching to distinguish between web frames, which three criteria can be specified? (Choose three.)

- A. Text
- B. Rows
- C. HTML
- D. Attribute
- E. Columns

Answer: ACD

14. Which statement is true when resetting your primary password using the self-service password reset feature?

- A. The answers to your security questions are case-insensitive.
- B. Once your password is reset, you will receive an email containing your new password and reset confirmation instructions.
- C. If you forget your password, you must answer at least two of the four security questions correctly in order to reset your password.
- D. The answers to your security questions must match the exact spelling, spacing and punctuation of those you entered when you first registered your answers to the security questions.

Answer: A

15. Which statement about application definitions is true?

- A. Application definitions automatically launch applications.
- B. Application definitions can be created by both administrators and users.
- C. Application definitions automatically fix error conditions when they occur.
- D. Application definitions automatically supply user credentials to applications.

Answer: B

16. Scenario: A user who logs on to two different workstations throughout the day reports that changes made to each of the workstations are not synchronized right away. You are required to resolve the user's problem and minimize the impact on network bandwidth.

Which user configuration setting would meet this requirement?

- A. Disable the "Time between automatic synchronization requests"
- B. Enable the "Time between automatic synchronization requests" and set the "Minutes" value to 1
- C. Enable the "Synchronize every time the users launch recognized applications or Logon Manager"
- D. Disable the "Synchronize every time the users launch recognized applications or Logon Manager"

Answer: C

17. What are two requirements when creating a host application definition? (Choose two.)

- A. Logon Manager
- B. SQL Server central store
- C. The Application Definition tool
- D. A terminal emulator that supports HLLAPI

Answer: CD

18. Which two tasks must be completed to extend the Active Directory schema? (Choose two.)

- A. Configure the schema to allow updates
- B. Run CTXADPREP from a command prompt
- C. Run CTXDOMAINPREP from a command prompt
- D. Run CTXSCHMAPREP from a command prompt
- E. Configure and run discovery from the Password Manager console

Answer: AD

19. Scenario: Your organization has 1000 concurrent Citrix Presentation Server users and 5000 desktop users. 600 of the desktop users are also Presentation Server users.

Which type of licenses and how many need to be purchased to provide Password Manager support to all desktop and concurrent Presentation Server users?

- A. 5000 Named User licenses
- B. 5000 Concurrent User licenses
- C. 400 Concurrent User licenses, and 5000 Named User licenses
- D. 1600 Concurrent User licenses, and 3400 Named User licenses

Answer: C

20. When using the Password Manager Service Configuration Tool, what is the purpose of the user account with rights and privileges specific to data proxy?

- A. It resets user passwords.
- B. It connects to the data proxy.
- C. It hosts the Citrix XTE Service.
- D. It reads and writes data to the central store.

Answer: D
