Exam : [1Y0-700](#)

"Citrix Application Firewall 8.0: Administration Exam", also known as 1Y0-700 exam, is a Citrix certification. With the complete collection of exam questions, Just4Study has assembled to take you through 58 Q&As to your 1Y0-700 exam preparation. In the 1Y0-700 exam resources, you will cover every field and category in Citrix Certification helping to ready you for your successful Citrix Certification.

The exam questions cover the latest real test and with all the correct answer. we promise the Q&A for Citrix Citrix Other Certification 1Y0-700 (Citrix Application Firewall 8.0: Administration Exam) examination of original title complete coverage. 1Y0-700 exam questions help you pass the exam.

Just4Study 1Y0-700 Feature:

* High quality - High quality and valued for the 1Y0-700 Exam: 100% Guarantee to Pass Your 1Y0-700 exam and get your Citrix Other Certification certification.

* Authoritative - Authoritative braindumps with complete details about 1Y0-700 exam.

* Cheaper - Our Just4Study products are cheaper than any other website. With our completed Citrix Other Certification resources, you will minimize your **Citrix Citrix Other Certification** cost and be ready to pass your 1Y0-700 exam on Your First Try, 100% Money Back Guarantee included!

* Free - Try free Citrix Other Certification demo before you decide to buy it in <http://www.Just4Study.com>.

Just4Study Guarantee:

Just4Study provides the most competitive quality of all exams for the customers, we guarantee your success at the first attempt with only our Certification Question&Answers, if you do not pass the 1Y0-700 exam at the first time, we will not only arrange FULL REFUND for you, but also provide you another exam of your claim, ABSOLUTELY FREE!

Free 1Y0-700 Demo Download

Just4Study offers free demo for Citrix Other Certification 1Y0-700 exam (Citrix Application Firewall 8.0: Administration Exam). You can check out the interface, question quality and usability of our practice exams before you decide to buy it. We are the only one site can offer demo for almost all products.

The Questions & Answers cover the latest real test and with all the correct answer. we promise the Q&A for **Citrix Citrix Other Certification 1Y0-700** examination of original title complete coverage. 1Y0-700 Questions & Answers help you pass the exam. Otherwise, we will give you a full refund.

VUE/Prometric Code: 1Y0-700

Exam Name: Citrix Application Firewall 8.0: Administration Exam(Citrix Other Certification)

Questions and Answers: 58 Q&A

[Citrix 1Y0-700](#) Test belongs to one of the Citrix Other Certification certified test, if needs to obtain the Citrix Other Certification certificate, you also need to participate in other related test, the details you may visit the [Citrix Other Certification](#) certified topic, in there, you will see all related Citrix Other Certification certified subject of examination. Just4Study professional provide Citrix Other Certification 1Y0-700 the newest Q&A, completely covers 1Y0-700 test original topic. With our complete Citrix Other Certification resources, you will minimize your Citrix Other Certification cost and be ready to pass your 1Y0-700 tests on Your First Try, 100% Money Back Guarantee included!

Just4Study Help You Pass Any IT Exam

[Just4Study.com](#) offers incredible career enhancing opportunities. We are a team of IT professionals that focus on providing our customers with the most up to date material for any IT certification exam. This material is so effective that we Guarantee you will pass the exam or your money back.

Exam : Citrix 1Y0-700

Title : Citrix Application Firewall 8.0: Administration Exam

1. Scenario: A banking company has decided to deploy an Application Firewall in their network environment, which already has two third-party load balancers. The Application Firewall deployment will be used to inspect approximately 400 Mb/sec of traffic. How should an administrator deploy the system in this environment?

- A. As a module on a NetScaler appliance
- B. As a standalone Application Firewall appliance
- C. As a module on a NetScaler High Availability pair
- D. As a cluster of standalone Application Firewall appliances

Answer:D

2. Scenario: The manufacturing department of a global biomedical company uses a web application to access manufacturing ratios and QA testing results from external plants that manufacture the biomedical devices. All the information for all the plants is stored in a data warehouse based on a Microsoft SQL server and accessed from the web application by running reports. Users receive instructions through a popup and then select the specific data for a report through a series of dynamically-generated drop-down menus populated from the Microsoft SQL database. Because the company is global, the web application also has language options that the user can select for the report to be delivered in.

Which part of the application can access sensitive data in this scenario?

- A. The popup
- B. The language options
- C. The resultant URL for a report
- D. The drop-down menus for the report details

Answer:D

3. Scenario: An online auctioning site has a web application that allows users to post their own items, including images and text. Users are permitted to animate their sites with Javascript. Auctioneers and shoppers must create an account and log in to be able to view any items. The web application creates session IDs at each login to keep track of shoppers and their carts and to generate suggestions for similar purchases.

Which three parts of the application can be exploited to access sensitive data? (Choose three.)

- A. The text
- B. The login
- C. The images
- D. The Javascript
- E. The session IDs

Answer:BDE

4. An administrator is considering adding an Application Firewall deployment to an environment that contains two

network firewalls, a public network and a private network. Where should the administrator place the Application Firewall?

- A. In the DMZ
- B. Behind the private network
- C. In front of the public network
- D. In front of the two network firewalls

Answer:A

5. Scenario: A banking company is planning on deploying an Application Firewall in their network environment. The company will need to use SSL, plans on using Advanced profiles, and requires redundancy in their network. The web servers never serve more than 300 Mb/sec of traffic. How should an administrator deploy the Application Firewall in this environment?

- A. As a standalone appliance
- B. As a module on a NetScaler
- C. As a cluster of standalone appliances
- D. As a module on a NetScaler High Availability pair

Answer:D

6. The positive security model works with Application Firewall by _____. (Choose a phrase to complete this statement correctly.)

- A. protecting web servers based on learning
- B. protecting web servers based on signatures
- C. only allowing traffic that matches approved patterns
- D. allowing traffic that does not match blocked patterns

Answer:C

7. Scenario: A media corporation has a website where viewers can read articles on current topics and stream videos of daily newscasts. The streaming videos are provided by IPTV, a streaming media application utilizing UDP. The company decides to add an Application Firewall to their network deployment to protect their site from hackers. To determine how many devices are necessary, the administrator must determine which traffic requires protection. Which content data type(s) does the Application Firewall need to inspect in this environment?

- A. Text/html
- B. Images and text/html
- C. UDP packets and text
- D. Text/html, UDP packets and images

Answer:A

8. Scenario: The IT Manager of a popular social networking website has decided to deploy at least one Application Firewall to protect the millions of users that regularly log on to the website. The social networking site allows members to post group messages, email personal messages and blogs as well as maintain a personal page with pictures, messages and backgrounds created with HTML code. An administrator is tasked with determining the content type of the data that will be passing through the Application Firewall to determine how many devices are necessary.

Which web application traffic and content data type(s) need to be inspected by the Application Firewall in this environment?

- A. HTTP traffic with GIF content data types
- B. HTTP traffic with text/html and text/javascript content data types
- C. All TCP and UDP traffic with text/html and GIF content data types
- D. All TCP traffic with text/html, POP3 and NNTP content data types

Answer:B

9. An administrator is creating and uploading an SSL certificate for a production environment. For added security, the administrator plans on encrypting the SSL key generated using the DES algorithm. What should the administrator

generate to accomplish this?

- A. A self-signed certificate with DER as the keyform
- B. A self-signed certificate with PEM as the keyform
- C. A certificate signing request with DER as the keyform
- D. A certificate signing request with PEM as the keyform

Answer:D

10. Scenario: A company's corporate security policy requires that web servers be protected with end-to-end SSL encryption. An administrator is configuring SSL in an environment with a load balancer and a standalone Application Firewall deployment to meet the corporate security policy. At a minimum, which two SSL termination points are necessary for this environment? (Choose two.)

- A. at the web server
- B. on the load balancer
- C. on the network firewall
- D. at the Application Firewall

Answer:AD

11. An administrator is deploying a standalone Application Firewall in the network environment depicted in the exhibit.

Click the Exhibit button to view the network diagram.

What should the NSIP address of the Application Firewall be in this environment?

- A. 10.3.19.0
- B. 172.16.1.1
- C. 172.16.1.2
- D. 10.3.19.254

Answer:C

12. The positive security model as applied in the Application Firewall can protect against _____ and _____ attacks. (Choose the two options that best complete the sentence.)

- A. worms
- B. viruses
- C. zero day
- D. layer 3 network
- E. application layer

Answer:CE

13. Scenario: A busy web application (400 Mb/sec) for an ecommerce company includes pictures of items for sale that are displayed to shoppers with text descriptions, an input field to accept customer reviews, a shopping cart and an encrypted billing page for credit cards. Many more customers browse than buy. An administrator needs to create profiles for this web application on the Application Firewall. How many profiles should an administrator configure for this web application for security with maximum performance?

- A. One, an advanced profile for the reviews and billing pages
- B. Two, a basic profile for the reviews page and an advanced profile for the billing page
- C. Three, a basic profile for browsing and separate advanced profiles for the reviews and the billing pages
- D. Four, separate basic profiles for the images and text, and separate advanced profiles for the reviews and the billing pages

Answer:B

14. How many SSL termination points exist in the attached exhibit?

- A. 1
- B. 2
- C. 3
- D. 4

Answer:D

15. An administrator is deploying a standalone Application Firewall in the network environment depicted in the exhibit. Click the Exhibit button to view the network diagram.

What should the VIP address range be for the Application Firewall in this environment?

- A. 1.1.100.0/24
- B. 10.3.19.0/24
- C. 172.16.1.0/24
- D. 10.3.19.100/124

Answer:C
