

## 310-052 braindumps

### SUN SUN Other Certifications

**310-052: Sun Certified Enterprise Architect for J2EE 5**

**Practice Exam:** 310-052 Exams

**Exam Number/Code:** 310-052

**Exam Name:** Sun Certified Enterprise Architect for J2EE 5

**Questions and Answers:** 320 Q&As

( [SUN Other Certifications](#) )

"Sun Certified Enterprise Architect for J2EE 5", also known as 310-052 exam, is a SUN certification. With the complete collection of exam questions, Just4Study has assembled to take you through 320 Q&As to your 310-052 exam preparation. In the 310-052 exam resources, you will cover every field and category in SUN Certification helping to ready you for your successful SUN Certification.

Exam : [310-052](#)

The exam questions cover the latest real test and with all the correct answer. we promise the Q&A for SUN SUN Other Certifications 310-052 (Sun Certified Enterprise Architect for J2EE 5) examination of original title complete coverage. 310-052 exam questions help you pass the exam.

#### **Just4Study 310-052 Feature:**

\* High quality - High quality and valued for the 310-052 Exam: 100% Guarantee to Pass Your 310-052 exam and get your SUN Other Certifications certification.

\* Authoritative - Authoritative braindumps with complete details about 310-052 exam.

\* Cheaper - Our Just4Study products are cheaper than any other website. With our completed SUN Other Certifications resources, you will minimize your **SUN SUN Other Certifications** cost and be ready to pass your 310-052 exam on Your First Try, 100% Money Back Guarantee included!

\* Free - Try free SUN Other Certifications demo before you decide to buy it in <http://www.Just4Study.com>.

#### **Just4Study Guarantee:**

Just4Study provides the most competitive quality of all exams for the customers, we guarantee your success at the first attempt with only our Certification Question&Answers, if you do not pass the 310-052 exam at the first time, we will not only arrange FULL REFUND for you, but also provide you another exam of your claim, ABSOLUTELY FREE!

#### **Free 310-052 Demo Download**

Just4Study offers free demo for SUN Other Certifications 310-052 exam (Sun Certified Enterprise Architect for J2EE 5). You can check out the interface, question quality and usability of our practice exams before you decide to buy it. We are the only one site can offer demo for almost all products.

The Questions & Answers cover the latest real test and with all the correct answer. we promise the Q&A for **SUN SUN Other Certifications 310-052** examination of original title complete coverage. 310-052 Questions & Answers help you pass the exam. Otherwise, we will give you a full refund.

**VUE/Prometric Code: 310-052**

Exam Name: Sun Certified Enterprise Architect for J2EE 5( SUN Other Certifications )

Questions and Answers: 320 Q&A

[SUN 310-052](#) Test belongs to one of the SUN Other Certifications certified test, if needs to obtain the SUN Other Certifications certificate, you also need to participate in other related test, the details you may visit the [SUN Other Certifications](#) certified topic, in there, you will see all related SUN Other Certifications certified subject of examination. Just4Study professional provide SUN Other Certifications 310-052 the newest Q&A, completely covers 310-052 test original topic. With our complete SUN Other Certifications resources, you will minimize your SUN Other Certifications cost and be ready to pass your 310-052 tests on Your First Try, 100% Money Back Guarantee included!

### **Just4Study Help You Pass Any IT Exam**

[Just4Study.com](#) offers incredible career enhancing opportunities. We are a team of IT professionals that focus on providing our customers with the most up to date material for any IT certification exam. This material is so effective that we Guarantee you will pass the exam or your money back.

Exam : SUN 310-052

Title : Sun Certified Enterprise Architect for J2EE 5

1. What is an advantage of XML over HTTP, as compared to SOAP over HTTP, for web services?

- A. guaranteed delivery
- B. more security options
- C. smaller message size
- D. strongly typed parameters

Answer: C

2. You are asked to architect an SOA solution that leverages Java web services. The architecture needs to be flexible and allow for the SOAP 1.1, SOAP 1.2, and REST implementations. Which Java EE technology should you use?

- A. JAXP
- B. JAXB
- C. JAX-WS
- D. JAX-RPC

Answer: C

3. Your web application requires access to several different services, so you created a Service Locator class to be used by the UI developers on the team. New services with different interfaces are occasionally added. Unfortunately, the caching benefits of the Service Locator class are NOT being realized because a new instance of this class is being created in every backing bean method that requires a service. Which pattern should you apply to eliminate this problem?

- A. Bridge
- B. Singleton
- C. Prototype
- D. Factory Method
- E. Business Delegate

Answer: B

4. An application needs to invoke a service on a remote system over a low latency connection, and then wait for a response. Which two are best for this type of invocation? (Choose two.)

- A. JMS topic
- B. JMS queue
- C. RMI over IIOP
- D. synchronous web service
- E. asynchronous web service

Answer: CD

5. You are architecting an online ordering application with these requirements:

Users access the system over the Internet using HTML.

An email message is sent to the user confirming the order.

Users must log in and are validated using LDAP.

The product catalog is stored in a relational database.

All orders are logged to the internal fulfillment system.

Orders must not be lost.

Which Java EE technology should be used to send orders to the fulfillment system?

A. JNDI

B. JMS

C. JAX-WS

D. RMI-IIOP

Answer: B

6. With the release of a new product line, there has been a significant increase in the volume of transactions on your web site. You need to scale your application and manage session failover. What is the best option for scalability?

A. add additional web servers and application servers

B. introduce a High Availability pair and utilize sticky sessions

C. add additional application servers and implement DNS round robin

D. add additional application servers and use clustered HttpSession

Answer: D

7. You are integrating with a single legacy Enterprise Information System. You are interested in the transaction management capabilities of the Java Connector Architecture. This new system needs the capability to invoke multiple operations against this single legacy system. These operations succeed together or fail together as a group. To which minimum level of transaction management are you going to set your resource adapter?

A. No transaction

B. Local transaction

C. Distributed transaction

D. Container Managed transaction

Answer: B

8. A teenage fashion web site, includes a set of pages for displaying and browsing their catalog, as well as pages for making fashion suggestions that also display tables of catalog entries. Currently, the JSP code uses scriptlets that perform database SELECT statements and format the results in HTML tables. You have been hired to help reduce the maintenance overhead when either the look is modified or the database schema changes. Which two patterns, used together, do you apply to reduce this maintenance overhead? (Choose two.)

A. View Helper

B. Front Controller

C. Composite View

D. Data Access Object

Answer: AD

9. A Java web component, EJB component, or another web service can be a client to a web service. Which Java API can the client use to access the web service through a Service Endpoint Interface?

A. JAXB

B. JAXR

C. JDBC

D. JAX-WS

Answer: D

10. What are two capabilities of the Abstract Factory pattern? (Choose two.)

A. creates whole-part hierarchies

- B. creates families of related objects
- C. enforces dependencies between concrete classes
- D. specifies the types of objects to create using a sample instance
- E. separates the construction of a complex object from its representation

Answer: BC

11. What are the three primary roles in a web service interaction? (Choose three.)

- A. Broker
- B. Facade
- C. Provider
- D. Decorator
- E. Requestor
- F. Interceptor

Answer: ACE

12. Your new architecture needs to access the business logic of an Enterprise Information Solution (EIS). What are three benefits of using the Java Connector Architecture to connect to EIS instead of implementing a proprietary solution? (Choose three.)

- A. security
- B. performance
- C. loose coupling
- D. connection pooling
- E. Common Client Interface

Answer: ADE

13. You are writing a utility that searches for existing web services provided by large companies through UDDI. Your web site allows the user to input search criteria using event-driven, state-managed GUI screens, performs the search, and displays them in a formatted HTML page. Which technologies would you use for this application?

- A. JSP and JAXB
- B. JSF and JAXR
- C. JSF and JAX-WS
- D. JSP and JAX-WS

Answer: B

14. Which three are parts of a SOAP message? (Choose three.)

- A. SOAP body
- B. SOAP endpoint
- C. SOAP headers
- D. SOAP handlers
- E. SOAP attachments

Answer: ACE

15. A company has a web service that provides the most recent price for stocks, mutual funds, and commodities. The company has the only web service that allows a person to check prices on all three financial assets with one call. Its system does not store this information but sends individual calls to each of the primary vendors for an asset and then aggregates the response to the requester. The company has committed to support a non-functional requirement (NFR) for performance that states it must process all requests within three seconds and each of the three vendors is obligated to support the NFR as dictated by the company. Where, in the message flow, is it appropriate to measure whether all the NFRs are met?

- A. when a request is received and a response is sent to the requester
- B. when a request is received, first call to vendor, last response from vendors, response is sent to a requester
- C. when a requester sends a request, the request is received, each call to vendor, each response from vendor, requester receives response

D. when a request is received, each call to vendor, each response from a vendor, a response is sent to a requester

Answer: D

16. A stock trading company is writing a new application for stock market forecasting. A significant portion of the work required by the business logic involves navigating through the persistent object model. As lead architect on this project, you have chosen JPA over EJB2 entity beans to implement these persistent objects. You have done this to maximize performance when navigating through the model. Why does JPA offer better performance for this task?

- A. JPA guarantees referential integrity at the object level.
- B. JPA allows the application to specify lazy or eager retrievals.
- C. JPA simplifies the source code that implements the object model.
- D. The guaranteed referential integrity in EJB2 entity beans is expensive.

Answer: B

17. A developer creates a Java web service to be used by consumers in an SOA. This SOA uses a UDDI service registry. How can the developer make the new service available to consumers?

- A. deploy to the registry using JAXR
- B. publish to the registry using JAXR
- C. query the registry using JAX-RPC
- D. target the registry using JAX-RPC

Answer: B

18. An online sporting goods store's web application uses HttpSession to store shopping carts. When the application is initially deployed, the business plan predicts only a few customers will access the site. Over time, the store projects a steady increase in volume.

The deployment plan calls for a single web container in the initial deployment. As demand increases, the plan calls for multiple web containers on separate hardware with clustered HttpSession objects.

Which two principles will help the application meet the requirements and optimize performance? (Choose two.)

- A. The application should store as much as possible in HttpSession objects.
- B. The application should NOT make frequent updates to HttpSession objects.
- C. The application should make coarse-grained updates to HttpSession objects.
- D. The application should create new HttpSession objects instead of updating existing objects.

Answer: BC

19. What are two benefits of using the Value List Handler pattern? (Choose two.)

- A. improves network performance
- B. facilitates exposing existing services
- C. provides an alternative to potentially inefficient EJB finders
- D. facilitates post-processing across heterogeneous requests
- E. provides a mechanism to support shared elements of composite views

Answer: AC

20. A new security feature has been requested for an existing web application with the following requirements:

All requests must be logged to a secure database.

Each request must be time-stamped with the start and completion times.

Each request must contain the IP address of the client that made the request.

Which pattern is most applicable for this new feature?

- A. Strategy
- B. Front Controller
- C. Abstract Factory
- D. Intercepting Filter
- E. Model View Controller

Answer: D
