Exam : Sybase 510-020

Title : Adaotive Server Enterprise Administrator Assoc.Certification

1. Where are table/index level statistics stored?

- A. sysstatistics
- B. systabstats
- C. On the leaf level of the index
- D. The GAM page
- E. The distribution page

Answer: B

2. Transaction isolation levels changes the behavior of:

- A. checkpoints
- B. database and log dumps
- C. reads
- D. writes
- E. reads and writes
- F. reads, writes, and checkpoints

Answer: C

3. The following commands were successfully executed in isql:

What will be the result of the transaction?

- A. It will remain open
- B. It depends on configuration options
- C. It was committed and the data will remain deleted
- D. It was automatically rolled back and the data will be re-inserted

Answer: D

4. The system table sysindexes exists in which of the following databases? (choose all that apply):

- A. master
- B. sybsystemprocs
- C. tempdb
- D. any user database

Answer: ABCD

5. Your customer database, with its data and logs on separate devices, has just crashed due to the failure of one of the data devices. Which of the following statements could be used to dump the transaction log in order to ensure recovery up to the moment of the crash?

- A. Dump tran customer to 'customer_log.dmp' with no_log.
- B. Dump tran customer to 'customer_log.dmp' with truncate_only
- C. Dump tran customer to 'customer_log.dmp' with no_truncate.
- D. It is not possible to dump the log in this case.

Answer: C

6. After installing ASE using default settings, which of the following databases are on the master device? (Choose all that apply.)

- A. master
- B. model
- C. tempdb
- D. sybsyntax
- E. sybssystemprocs

Answer: ABC

7. Which system table contains the following columns: lstart, vstart, size

- A. sysobjects
- B. sysusages
- C. sysdatabases
- D. sys.servers
- E. sysdevices

Answer: B

8. Which of the following methods can reduce the partition skew for a given table? (Choose all that apply.)

- A. Execute sp_helppartition tablename
- B. Increase the configured value of disk i/o structures
- C. Alter the table to add more partitions
- D. Create a clustered index on the table (or if one exists, drop and recreate it)
- E. For a heap table, bulk copy data out, truncate table, bulk copy data in

Answer: DE

9. The databases created by a standard ASE install are (choose all that apply):

- A. dbccdb
- B. master
- C. model
- D. pubs2
- E. sybsecurity
- F. sybssystemdb
- G. sybssystemprocs
- H. tempdb

Answer: BCFGH

10. Which databases are required for a properly functioning ASE?

- A. master, model, tempdb, sybssystemprocs, sybssystemdb
- B. master, model, tempdb, sybssystemprocs, sybsecurity
- C. master, model, tempdb, sybssystemdb, sybsecurity, dbccdb
- D. master, model, tempdb, dbccdb, sybssystemprocs

Answer: A

11. Identify the segment names that are common to all databases.

- A. system
- B. table
- C. logsegment

- D. default
- E. index
- F. user
- G. data

Answer: ACD

12. Given the following statement:

How will the index be created?

- A. With a parallel sort with 2 producers and 1 consumer
- B. The statement will fail.
- C. With a serial sort.
- D. With a parallel sort with 2 producers and 2 consumers

Answer: B

13. Given the code fragment:

What is the final value of column c in table t?

- A. 0
- B. 1
- C. 10
- D. 11
- E. 100
- F. 110
- G. 111

Answer: E

14. When you execute a stored procedure, in which database does ASE first look for that procedure?

- A. master
- B. current
- C. sybssystemprocs
- D. sybssystemdb
- E. default

Answer: B

15. Which of the following parameters must be reconfigured from the default in order for hash-based parallel access to be considered? (Choose all that apply.)

- A. max parallel degree
- B. number of user connections
- C. max scan parallel degree
- D. number of worker processes
- E. memory per worker process

Answer: ACD

16. Within a nested transaction, a rollback always

- A. rolls back all the changes done only within the nested transaction
- B. rolls back all the changes done within the entire most outer transaction
- C. decrements the global variable @@trancount by one
- D. rolls back the transaction to the last named savepoint

Answer: B

17. Which isolation level has the following behavior: shared locks are held until a select finishes reading a row or page, and selects wait for exclusive locks to be released.

- A. 0
- B. 1

C. 2

D. 3

Answer: B

18. What is the purpose of the dbccdb database?:

A. It is required for running any dbcc command

B. It is required for running the dbcc checkstorage command

C. It is required for running the dbcc memusage command

D. It is required for running dbcc trace

E. It is not required for anything

Answer: B

19. The sybsecurity database is only needed if you plan on using:

A. auditing

B. user defined roles

C. user defined groups

D. row level access control

Answer: A

20. The following commands were successfully executed in isql:

What will be the result of the transaction?

A. It will remain open

B. It depends on configuration options

C. It was committed and the data will remain deleted

D. It was automatically rolled back and the data will be re-inserted

Answer: C
