Nortel NCDS

920-209: NCDS-Multiservice Switch 7400/15000/20000

Practice Exam: 920-209 Exams

Exam Number/Code: 920-209

Exam Name: NCDS-Multiservice Switch 7400/15000/20000

Questions and Answers: 63 Q&As

([NCDS](#))

Exam : [920-209](#)

"NCDS-Multiservice Switch 7400/15000/20000", also known as 920-209 exam, is a Nortel certification. With the complete collection of exam questions, Just4Study has assembled to take you through 63 Q&As to your 920-209 exam preparation. In the 920-209 exam resources, you will cover every field and category in Nortel Certification helping to ready you for your successful Nortel Certification.

The exam questions cover the latest real test and with all the correct answer. we promise the Q&A for Nortel NCDS 920-209 (NCDS-Multiservice Switch 7400/15000/20000) examination of original title complete coverage. 920-209 exam questions help you pass the exam.

Just4Study 920-209 Feature:

* High quality - High quality and valued for the 920-209 Exam: 100% Guarantee to Pass Your 920-209 exam and get your NCDS certification.

* Authoritative - Authoritative braindumps with complete details about 920-209 exam.

* Cheaper - Our Just4Study products are cheaper than any other website. With our completed NCDS resources, you will minimize your **Nortel NCDS** cost and be ready to pass your 920-209 exam on Your First Try, 100% Money Back Guarantee included!

* Free - Try free NCDS demo before you decide to buy it in <http://www.Just4Study.com>.

Just4Study Guarantee:

Just4Study provides the most competitive quality of all exams for the customers, we guarantee your success at the first attempt with only our Certification Question&Answers, if you do not pass the 920-209 exam at the first time, we will not only arrange FULL REFUND for you, but also provide you another exam of your claim, ABSOLUTELY FREE!

Free 920-209 Demo Download

Just4Study offers free demo for NCDS 920-209 exam (NCDS-Multiservice Switch 7400/15000/20000). You can check out the interface, question quality and usability of our practice exams before you decide to buy it. We are the only one site can offer demo for almost all products.

The Questions & Answers cover the latest real test and with all the correct answer. we promise the Q&A for **Nortel NCDS 920-209** examination of original title complete coverage. 920-209 Questions & Answers help you pass the exam. Otherwise, we will give you a full refund.

VUE/Prometric Code: 920-209

Exam Name: NCDS-Multiservice Switch 7400/15000/20000(NCDS)

Questions and Answers: 63 Q&A

[Nortel 920-209](#) Test belongs to one of the NCDS certified test, if needs to obtain the NCDS certificate, you also need to participate in other related test, the details you may visit the [NCDS](#) certified topic, in there, you will see all related NCDS certified subject of examination.

Just4Study professional provide NCDS 920-209 the newest Q&A, completely covers 920-209 test original topic. With our complete NCDS resources, you will minimize your NCDS cost and be ready to pass your 920-209 tests on Your First Try, 100% Money Back Guarantee included!

Just4Study Help You Pass Any IT Exam

[Just4Study.com](#) offers incredible career enhancing opportunities. We are a team of IT professionals that focus on providing our customers with the most up to date material for any IT certification exam. This material is so effective that we Guarantee you will pass the exam or your money back.

Exam : Nortel 920-209

Title : NCDS-Multiservice Switch 7400/15000/20000

1. You are in the process of designing a new network. You are gathering information on the communities of interest profiles and the application requirements. In which stage in the engineering cycle are you currently involved?

- A. feedback
- B. internal inputs
- C. external inputs
- D. network design

Answer: B

2. You have determined how each of the customer traffic types map to Multiservice Switch services. You have also calculated the amount of traffic within the network. What is your next step?

- A. Choose FP types.
- B. Engineer the backbone.
- C. Check CP requirements.
- D. Verify your performance metrics.

Answer: B

3. Reliability in a network can be accomplished through network level controls and nodal level controls. Which statement is correct?

- A. Network level controls operate in real-time (in cell-times at the frame/cell level).
- B. Node level controls operate in near real time, that is, in propagation times across the network and call duration times.
- C. Network level controls are implemented with admission controls for new connections, network routing systems and flow control rate adaptation schemes.
- D. Network level controls are implemented with queues supporting different priority levels, sophisticated queue management capabilities and rate controls to provide policing of user traffic.

Answer: C

4. A topology that consists of a full mesh core of relatively few nodes with larger numbers of edge nodes that are dual-homed to the core nodes. Why is this a good compromise?

- A. low trunk cost
- B. support for parallel clusters
- C. full redundancy with a maximum of three hops per connection
- D. a worldwide carrier network consisting of a number of clusters connected by continental links

Answer: C

5. Path load balancing is used to increase PNNI network reliability. Which three statements are correct? (Choose

three.)

- A. Multiservice Switch supports two load balancing techniques.
- B. Path load balancing increases network stability in case of link or node failure.
- C. Load balancing is intended to produce a balanced utilization of network resources.
- D. Requirements include finding multiple diverse acceptable paths and selecting one of those paths.

Answer: BCD

6. The level of service for a customer can be measured in many ways. Which three items are measurements for level of service? (Choose three.)

- A. availability
- B. throughput
- C. link utilization
- D. response time
- E. rate enforcement

Answer: ABD

7. The design and implementation of any networking product imposes constraints on the ability of the network to support the required level of service. Which statement is true?

- A. Nodal engineering involves configuring enough bandwidth in the path between each pair of sites to support the traffic.
- B. Backbone engineering has enough ports to support the required number of access lines, that is, hardware engineering.
- C. Backbone engineering involves verifying that the backbone has sufficient processor and memory resources to accept the user traffic and switch it to its destination, that is, service engineering.
- D. Backbone engineering involves calculating the amount of traffic that will flow between each pair of nodes (based on the application information and COI from the internal inputs/requirements step of the engineering process).

Answer: D

8. You are in the process of designing a new network. You need to determine the backbone bandwidth requirements of the network. One application has network traffic of 2000 Kbps, the network packet consists of a 512 byte payload and 6 bytes of overhead. What are the bandwidth requirements for the backbone for this application?

- A. 2023 Kbps
- B. 2340 Kbps
- C. 2347 Kbps
- D. 2006 Kbps

Answer: A

9. During the process of designing a new network you need to estimate the backbone requirements for the network. In which part of the engineering cycle would you be involved if you are estimating the backbone requirements?

- A. feedback
- B. internal inputs
- C. external inputs
- D. network design

Answer: D

10. Engineering is a continuous process and requires management of the network topology. Which three reasons are important to gather feedback from the network, applications and users? (Choose three.)

- A. To ensure the desired level of service is being met and the assumptions about transactions were valid.
- B. This enables the network operator to determine trends in the network and to quantify its cost over time.
- C. All gathered data has to be fed back into the requirements step of the engineering cycle to enable fine-tuning of network performance by repeating the network design step -- completing the engineering cycle.
- D. Because of the difficulty that can be encountered in gathering information in the requirements phase (before network design), the design may be incorrect due to the inaccuracy of the assumptions that were made.
