

## HP0-438 braindumps

### HP Certification III

#### HP0-438: Advanced SAN Architecture

**Practice Exam:** HP0-438 Exams

**Exam Number/Code:** HP0-438

**Exam Name:** Advanced SAN Architecture

**Questions and Answers:** 74 Q&As

( [Certification III](#) )

Exam : [HP0-438](#)

"Advanced SAN Architecture", also known as HP0-438 exam, is a HP certification. With the complete collection of exam questions, Just4Study has assembled to take you through 74 Q&As to your HP0-438 exam preparation. In the HP0-438 exam resources, you will cover every field and category in HP Certification helping to ready you for your successful HP Certification.

The exam questions cover the latest real test and with all the correct answer. we promise the Q&A for HP Certification III HP0-438 (Advanced SAN Architecture) examination of original title complete coverage. HP0-438 exam questions help you pass the exam.

#### **Just4Study HP0-438 Feature:**

\* High quality - High quality and valued for the HP0-438 Exam: 100% Guarantee to Pass Your HP0-438 exam and get your Certification III certification.

\* Authoritative - Authoritative braindumps with complete details about HP0-438 exam.

\* Cheaper - Our Just4Study products are cheaper than any other website. With our completed Certification III resources, you will minimize your **HP Certification III** cost and be ready to pass your HP0-438 exam on Your First Try, 100% Money Back Guarantee included!

\* Free - Try free Certification III demo before you decide to buy it in <http://www.Just4Study.com>.

#### **Just4Study Guarantee:**

Just4Study provides the most competitive quality of all exams for the customers, we guarantee your success at the first attempt with only our Certification Question&Answers, if you do not pass the HP0-438 exam at the first time, we will not only arrange FULL REFUND for you, but also provide you another exam of your claim, ABSOLUTELY FREE!

#### **Free HP0-438 Demo Download**

Just4Study offers free demo for Certification III HP0-438 exam (Advanced SAN Architecture). You can check out the interface, question quality and usability of our practice exams before you decide to buy it. We are the only one site can offer demo for almost all products.

The Questions & Answers cover the latest real test and with all the correct answer. we promise the Q&A for **HP Certification III HP0-438** examination of original title complete coverage. HP0-438 Questions & Answers help you pass the exam. Otherwise, we will give you a full refund.

#### **VUE/Prometric Code: HP0-438**

Exam Name: Advanced SAN Architecture( Certification III )

Questions and Answers: 74 Q&A

[HP HP0-438](#) Test belongs to one of the Certification III certified test, if needs to obtain the Certification III certificate,

you also need to participate in other related test, the details you may visit the [Certification III](#) certified topic, in there, you will see all related Certification III certified subject of examination.

Just4Study professional provide Certification III HP0-438 the newest Q&A, completely covers HP0-438 test original topic. With our complete Certification III resources, you will minimize your Certification III cost and be ready to pass your HP0-438 tests on Your First Try, 100% Money Back Guarantee included!

### **Just4Study Help You Pass Any IT Exam**

*Just4Study.com offers incredible career enhancing opportunities. We are a team of IT professionals that focus on providing our customers with the most up to date material for any IT certification exam. This material is so effective that we Guarantee you will pass the exam or your money back.*

Exam : HP HP0-438

Title : Advanced SAN Architecture

1. Which PID formats use the same PIDs for a port?

- A. native and core
- B. VC encoded and native
- C. core and extended edge
- D. native and extended edge

Answer: D

2. What should the security manager do if there are data paths between security domains?

- A. Disable any data path between the domains.
- B. Approve any potential paths between domains.
- C. Nothing. Between the domains, all data is safe.
- D. Implement data encryption on paths between domains.

Answer: B

3. What is required to consolidate two fabrics with B-Series switches in a Meta SAN with some common storage?

Select TWO.

- A. MP Router
- B. fabric merge
- C. proxy devices
- D. proxy switches
- E. unique domain IDs

Answer: AC

4. Which zoning type must be used in a heterogeneous fabric with M- and B- Series switches?

- A. VSAN zoning
- B. name server zoning
- C. fabric address zoning
- D. domain-port-area zoning

Answer: B

5. Which are two of the most important considerations when deciding to expand a fabric? Select TWO.

- A. maintain the original fabric topology
- B. maintain the original data access needs
- C. expand the fabric for maximum bandwidth
- D. expand the fabric for maximum connectivity
- E. expand the fabric so that it supports future growth

Answer: BE

6. A SAN administrator has an existing test SAN based on 1 Gbps B-series SAN switches with zoning. To evaluate the compatibility of 1 Gbps and 2 Gbps switches, the administrator powers on a 1 Gbps and a 2 Gbps SAN switch (factory default settings without zoning). An ISL is then installed between the two switches. The administrator notices that the fabric segments. What are two possible causes of the segmentation? Select TWO.

- A. The zoning information is incompatible.
- B. The core PID parameters are conflicting.
- C. The new switch has a conflicting domain ID.
- D. The two switches are not at the same firmware version.
- E. The speed on the port must first be set for 1 Gbps operation.

Answer: BC

7. Before merging a fabric in a high-available redundant SAN environment with B-Series switches, you change conflicting zoning configurations and domain IDs. What else must you do in case of a mismatch to avoid fabric segmentation?

- A. Adjust the name table entries for one switch at a time.
- B. Adjust the buffer-to-buffer credits settings in one fabric at a time.
- C. Adjust the Core PID parameter bit settings in one fabric at a time.
- D. Adjust the TCP/IP subnet address settings for one switch at a time.

Answer: C

8. What is a typical consequence when you migrate a cascaded to a meshed fabric?

- A. average hop count increases
- B. number of user ports decreases
- C. ISL latency affects data throughput
- D. number of device paths does not change

Answer: B

9. Which two factors affect the merging of SANs? Select TWO.

- A. IP addresses
- B. SNMP configuration
- C. zone naming standards
- D. switch fabric parameters
- E. switch naming standards

Answer: CD

10. What is the consequence of merging a zoned fabric with a non-zoned fabric?

- A. The fabrics do not merge. They segment and require manual intervention.
- B. Devices that were in the non-zoned fabric are not accessible until they are added to the currently enabled configuration.
- C. Devices in the fabric are not accessible until the devices in the non-zoned fabric are zoned and made part of the effective configuration.
- D. Any devices that were in the non-zoned fabric are automatically configured into a new zone as part of the effective configuration so they can function.

Answer: B

11. What is NOT an important security foundation for IT environments?

- A. security audits at regular time intervals
- B. a secure area for the systems in the security domain
- C. remote access for management and monitoring
- D. defined security policies for a defined security domain

Answer: C

12. What is the definition of "User Port" in switch configurations?

- A. any port on a switch available for hosts
- B. any port on a switch available for storage systems
- C. any port on a switch where hosts and storage systems are connected
- D. any port of a switch where hosts, storage systems, and ISLs are connected

Answer: C

13. What is an advantage of WWN spoofing?

- A. You can remotely change FCA settings on SAN hosts.
- B. You can configure zones in-band from any attached FCA.
- C. You do not need to reconfigure the WWN based SAN security after an FCA failure.
- D. The FCA automatically reconfigures the WWN based SAN security after an FCA failure.

Answer: C

14. Why is it important to secure the WWNs in the storage environment?

- A. to disable WWN spoofing attacks from FCAs
- B. to allow safe promiscuous mode on FC ports
- C. to prevent FC ports from entering promiscuous mode
- D. to harden the name service in the fabric for security reasons

Answer: A

15. A SAN consists of two cascaded switches with no free ports and one ISL. The SAN administrator intends to add a new switch and cascade it off one of the existing switches. What is the recommended procedure?

- A. Shut down the SAN and recable it with the new switch.
- B. Use the ISL to connect the two existing switches to the new switch.
- C. Shut down one of the existing switches and recable with the new switch.
- D. Attach the new switch to the least critical device port and recable the SAN.

Answer: D
