Exam : HP HP0-645

Title : Implementing HP ProLiant Servers

1. When memory is the only component to be tested, which diagnostic option should be selected?

- A. QuickCheck
- B. Automatic
- C. Prompted
- D. CPQSET+

Answer: C

2. What is the act of mirroring across two physical controllers known as?

- A. mirroring
- B. striping
- C. duplexing
- D. parity

Answer: C

3. During configuration of the ProLiant Support Pack deployed by the Remote Deployment Utility to a server, you are asked to set the Device Authentication relationship. Which relationship is the most secure?

- A. Trust All
- B. Trust by Name
- C. Trust by Certificate
- D. Trust Administrator

Answer: C

4. What is the recommended average disk queue length for a single disk spindle?

- A. Less than one
- B. Less than two
- C. Less than four
- D. Less than eight
- E. Less than sixteen

Answer: B

5. Which agent-layer components facilitate system software updates and version management on HP ProLiant servers? Select TWO.

- A. Version Control Repository Manager (VCRM)
- B. ActiveUpdate
- C. Software Version Control Manager (SVCM)
- D. Version Control Agents (VCAs)
- E. Insight Manager 7

F. Version Revision Manager (VRM)

Answer: AD

6. Which security feature of Insight Manager 7 is used to encrypt all communication between the browser and management server?

- A. authentication
- B. Secure Sockets Layer (SSL)
- C. digital certificate
- D. transitive trust

Answer: B

7. Although you upgraded an application to improve server performance, you noticed that server performance was actually degraded. You were then informed that a user admitted opening an email attachment that might have contained a virus. What steps should you take to address this problem? Select TWO.

- A. View Insight Manager 7 to determine the device status.
- B. Update to the latest virus definition.
- C. Downgrade the application.
- D. Compare the application requirements to the server configuration.
- E. Run virus scanning software and restart the server to remove any memory-resident virus remnants.

Answer: BE

8. You want to upgrade an existing HP ProLiant ML370 G2 server with an additional processor. The server is running a business-critical application and requires maximum uptime. How should you identify the correct part number for the new processor?

- A. Restart the server and identify the processor type and speed during POST.
- B. Use the server serial number to decipher the processor type and speed.
- C. Open the server and look at the model and speed markings on the processor.
- D. Open the server and read this information on the inside cover.
- E. Non applicable, the HP ProLiant ML370 G2 server does not support multiple processors.

Answer: B

9. What is meant by the term "Scope of work"?

- A. a detailed list of project deliverables
- B. a detailed summary of work completed
- C. a brief background of a project or component
- D. a general objective for a customer engagement

Answer: A

10. What is the most likely problem when you receive only audible codes (beeps) during POST?

- A. The monitor signal cable is not connected.
- B. The system sees intermittent memory parity errors.
- C. No memory modules are present.
- D. The monitor is in power saver mode.

Answer: C

11. You are configuring an HP ProLiant server with multiple storage devices using a Wide SCSI controller. Excluding the controller, how many SCSI IDs are available on a Wide SCSI bus?

- A. 7
- B. 8
- C. 15
- D. 16

Answer: C

12. You need to initiate a cold reset and bring the host server back online after the operating system has become unresponsive. Which feature of HP Remote Insight Lights-Out Edition (RiLOE) enables you to perform this task?

- A. remote reset
- B. graphical remote console
- C. server failure alerting
- D. reset and failure sequence replay

Answer: A

13. You are monitoring an HP ProLiant ML530 server. The server is configured with a Remote Insight Lights-Out Edition (RiLOE) board from a management PC in the same network. What is the recommended video resolution on the remote server compared to the video setting of the management PC?

- A. The resolution of the remote server should be lower than the management PC.
- B. The resolution of the remote server should be higher than the management PC.
- C. The resolution of the remote server should be lower than or equal to the management PC.
- D. Nothing, the resolution does not make a difference.

Answer: C

14. You are using NetIQ to resolve alerts in your enterprise. Where can you find the Management Information Base (MIB) for ProLiant servers?

- A. OnSite Agents Reference Set
- B. MIB directory on the SmartStart CD
- C. ProLiant Essentials ?NetIQ Integration Pack
- D. Compaq directory of the NetIQ distribution CD
- E. Management Toolkit Directory on the Management CD

Answer: E

15. After a field engineer adds a second array controller to an HP ProLiant server, the operating system will not boot. What is the likely cause of this problem?

- A. interrupt conflicts
- B. incorrect slot order
- C. controller boot order
- D. incorrect jumper settings

Answer: C

16. You have four HP hot-pluggable drives in a RAID 1+0 configuration. On the second drive, only the amber LED is illuminated. What is the recommended action?

- A. Replace the second drive.
- B. The array is lost; you cannot do anything to recover it.
- C. Wait until the first LED (online?) illuminates; then replace the failed drive.
- D. Replace the second drive and manually start rebuilding the array in the ACU.

Answer: A
