Exam : Juniper JN0-521

Title : Juniper(r) FWV.Associate (JNCIA-FWV)

1. When a firewall receives the first packet in a series, what will it immediately do?

- A.Check its route table.
- B.Check its session table.
- C.Determine if traffic is crossing zones.
- D.Verify that it is not malformed or a fragment.

Answer: D

2. You are configuring an interface in the untrust zone with an IP address, telnet enabled, and WebUI management. Which sequence of steps must be performed to make the interface operational at the end of the configuration sequence?

- A.Assign the interface to a zone, define the IP address, enable Web and telnet services.
- B.Assign the interface to a zone, define the IP address, accept default management services.
- C.Assign the interface to a virtual router, define the IP address, enable Web and telnet services.
- D.Assign the interface to a zone, define the IP address, define a manage IP address, accept default management services.

Answer: A

3. When configuring a firewall in a critical environment where a local backup configuration is quickly needed, what should be completed on a periodic basis?

- A.Execute exec config rollback.
- B.Execute save config to last-known-good.
- C.Execute save regularly or create a script that does this.
- D.Execute save software from flash to pcmcia .

Answer: B

4. Which statement accurately describes the "config rollback" feature?

- A.Once the "config rollback" feature is enabled, it allows the administrator to re-apply a previously saved configuration file from flash.
- B.The "config rollback" feature is enabled by default, it allows the administrator to re-apply a previously saved configuration file from flash.
- C.Once the "config rollback" feature is enabled, it allows the administrator to re-apply a locked configuration file from a separate area in flash.
- D.Once the "config rollback" feature is enabled, it allows the administrator to revert to the prior ScreenOS image or configuration file in the event an upgrade operation aborts.

Answer: C

5. Telnet management has been enabled on an interface in the untrust zone.

What else should be completed to limit telnet access to the ScreenOS device from trusted management PCs?

- A. Define a permitted IP address.
- B. Define a policy from trust to untrust.
- C. Define a trusted IP in the address table.
- D. Define a manage IP address on this interface.

Answer: A

6. Which type of NAT is performed when you implement interface-based NAT?

- A. source IP address translation
- B. destination IP address translation
- C. source IP and port address translation
- D. destination IP and port address translation

Answer: C

7. When managing a ScreenOS device using the WebUI and performing an image upgrade, from which hardware component will the ScreenOS image be loaded?

- A. TFTP server
- B. PC local disk
- C. internal flash
- D. Compact Flash Card

Answer: B

8. Which command would you run to check IPSec Phase 1 active status?

- A. get sa
- B. get event 427
- C. get sa active
- D. get ike cookie

Answer: D

9. By default, from which hardware component is the startup copy of the ScreenOS loaded?

- A. NVRAM
- B. TFTP server
- C. internal flash
- D. PCMCIA card

Answer: C

10. Click the Exhibit button.

In the exhibit, which interface would be used to forward traffic to host 1.1.7.5?

- A. e0/1
- B. e0/2
- C. e0/3
- D. e0/4

Answer: C

11. What will change the root admin password?

- A. set admin password
- B. set root-admin password
- C. set admin password
- D. set admin user password

Answer: A

12. In the packet forwarding decision process, how is the second packet handled differently than the first in a series of

allowed interzone packets?

- A.The second packet causes an ARP query.
- B.The second packet is checked against the policy table.
- C.The second packet is forwarded without a sanity check.
- D.The second packet is forwarded without checking the route table.

Answer: D

13. Click the Exhibit button.

In the exhibit, which two forms of address translation would have generated the output shown? (Choose two.)

- A.MIP
- B.NAT-src with no DIP
- C.Interface-based translation
- D.NAT-src with a DIP, fixed-port disabled

Answer: BC

14. A ScreenOS firewall has the correct interfaces addressed and active. A policy is written allowing interzone FTP traffic from a directly connected client. But the traffic does not cross the firewall from the client to the server.

What is the most likely problem with the firewall?

- A.The ScreenOS firewall has no physical connection to the FTP server.
- B.The ALG option on the ScreenOS firewall has not been enabled for FTP traffic.
- C.The ScreenOS firewall does not have a route defined to the FTP servers' subnet.
- D.The ScreenOS firewall does not have a route defined to the FTP clients subnet.

Answer: C

15. What is the purpose of the "Manage-IP" address on a ScreenOS device?

- A.It defines a list of addresses that are trusted to perform management on the ScreenOS device.
- B.It is used in policy rules to determine which device is allowed to manage the ScreenOS device.
- C.It is the address that an external device uses to gain management access to a ScreenOS device.
- D.It defines a list of device addresses that can manage the ScreenOS device without being authenticated prior to session establishment.

Answer: C

16. Which statement is correct regarding administrator privileges?

- A.Any administrator can change their privileges on an as-needed basis.
- B.Administrator privileges can only be established and changed by the root administrator.
- C.Administrator privileges can be established and changed by the root and all-privilege administrator.
- D.Administrator privileges can only be established by the root and can be changed by the root and all-privilege administrator.

Answer: B

17. You are looking at the event log of the responding device and it says, "Rejected an initial Phase 1 packet from an unrecognized peer gateway"

What are three likely reasons for the failure? (Choose three.)

- A.The peer ID is misconfigured.
- B.The default gateway is missing.
- C.The preshare keys are mismatched.
- D.The gateway address is misconfigured.
- E.The outgoing interface is misconfigured.

Answer: ADE

18. An operational firewall needs a configuration loaded and executed while it is passing user data.

Which CLI command will perform this process without interrupting traffic?

- A.save config from tftp 1.1.7.250 15June06.cfg to flash

B.save config from tftp 1.1.7.250 15June06.cfg to ram
C.save config from tftp 1.1.7.250 15June06.cfg merge
D.save config from tftp 1.1.7.250 15June06.cfg to flash
Answer: C

19. Which ScreenOS WebUI button reorders policies?

- A.Shift
- B.Move
- C.Reorder
- D.Transfer

Answer: B

20. What is the purpose of the "Permitted IP" address on a ScreenOS device?

- A.It defines a list of addresses that are trusted to perform management on the ScreenOS device.
- B.It is used in policy rules to determine which user traffic is allowed through the ScreenOS device.
- C.It defines which range of addresses that can access devices connected to the ScreenOS device.
- D.It is the address that an external device uses to gain management access to a ScreenOS device.

Answer: A
