Exam : IBM LOT-952

Title : IBM Lotus Notes Domino 8.5 Application Dev Foundation Skills

1. Joe wants to display a company logo in the background of a view in his sales application. How can he do this task?
- A. Use an Image Resource as the background graphic for the view.
 - B. Use a URL as the background graphic for the view, where the URL points to the logo.
 - C. Display the view in a frameset, and set the background of the view's frame to an Image Resource or URL depicting the logo.
 - D. He can't do this. Views cannot have background graphics.

Answer: A

2. Tony wants to create a duplicate of the Video application. He wants to keep a version of the data on the same server as the production application but does not want any new documents or document modifications to be replicated into his new database after he creates it. Which one of the following should Tony do to create his archive?
- A. Create a new copy of the database.
 - B. Create a replica copy of the database.
 - C. Use Microsoft Windows Explorer to create a copy of the database file.
 - D. Create a replica copy of the database and disable replication on the database properties.

Answer: A

3. Herb has some data to display in a form, in a form, and he would like to have it display in a formatted grid. What option would he use to format this data layout?
- A. Create > Table
 - B. Create > Layer
 - C. Create > Section > Table
 - D. Create > Layout Region > Table

Answer: A

4. Lynne created a Book Review application that has a default access level of Author. She created a Review document, but was unable to edit the document later. Why would this problem occur?
- A. The document form design does not include a Readers type field.
 - B. The document form design does not include a Authors type field.
 - C. Her ACL entry needs to have the Edit document option selected.
 - D. She needs at least Author access with the Create Documents option selected.

Answer: B

5. Tim has enabled document locking in the Sales application. He has noticed some documents that have been locked for several hours. The users tell him that their computers had crashed while they were working on documents.

What can Tim do to make the documents unlocked?

- A. Have an administrator run fixup on the database.
- B. Write an agent to run on selected documents. Use the formula:
FIELD \$Lock := @DeleteField
- C. Have someone with Manager access right-click on a locked document and select Unlock Document.
- D. The nightly compact of the database will unlock the documents. Tim can also manually compact the database.

Answer: C

6. Cheryle would like to have access to her mail file while she is traveling and disconnected from the network. After she arrives at her destination, she wants to connect to the network and synchronize her mail file updates with the server version of her mail file. How can she accomplish this task?

- A. Create a local copy of her mail file.
- B. Create a local replica of her mail file.
- C. Create a local mirror copy of her mail file.
- D. Create a local synchronized copy of her mail file.

Answer: B

7. Shandi has created a Suggestion database in Designer. She would like to create additional databases based on the Suggestion database design, and she would like to have them automatically updated whenever she changes the original design. How would she accomplish this task?

- A. Select the Database Inheritance option Allow inheritance in the additional databases.
- B. Select the Database Inheritance option Inherit from master template in the additional databases.
- C. Select the Database Inheritance option Database file is a master template in the original Suggestion database.
- D. Select the Database Inheritance option Allow other databases to inherit design in the original Suggestion database.

Answer: C

8. Christopher is making a new application using the NewVideo design template that he plans to customize. He wants to make sure that his new application will not get future modifications to the NewVideo design template. Which one of the following should Christopher do to accomplish this task?

- A. Create a blank application and refresh the design of the new application using the NewVideo design template.
- B. Create the new application from the NewVideo design template and clear Inherit future design changes in the New Application window.
- C. Create the new application from the NewVideo design template and select Lock Design Documents in the application Design properties
- D. Create the new application from the NewVideo design template and then open the application Design properties and select Database is a master template.

Answer: B

9. Mac is planning a Change Control application that will be used by thousands of staff located in 10 different countries. What is one thing that Mac can do to help optimize the performance of the application for his users?

- A. On the Advanced tab of Database properties, enable Support specialized response hierarchy and enable Allow simple search.
- B. On the Advanced tab of Database properties, enable Don't Support specialized response hierarchy and disable Allow simple search.
- C. Use File > Application > New Copy to create a copy of the application on a server in each country, and have users access the application from a local server.
- D. Use File > Replication > New Replica to create a replica of the application on a server in each country, and have users access the application from a local server.

Answer: D

10. Kelly supports the Inventory application. This application is accessed by staff in India, the UK, Brazil, and the USA. For reasons of performance and contingency planning, the office in each country has its own server. Kelly needs the Inventory application to reside on each of these servers, and she needs to ensure that the application data and

design is kept in sync among all of these locations. How can Kelly meet this requirement?

- A. Select the Inventory application. For each server, create a synchronized copy of the application by selecting File > Synchronization > New Copy
- B. Select the Inventory application. For each server, create a mirror of the application by selecting File > Application > New Mirror, and specify the target Server.
- C. Select the Inventory application. For each server, create a replica of the application by selecting File > Replication > New Replica, and specify the target Server.
- D. Select the Inventory application. For each server, create a copy of the application by selecting File > Application > New Copy. specify the target Server, and select the Synchronize option.

Answer: C
