EMC Legato Cert

e22-141: emc legato cert networker 7 x specialist

Practice Exam: e22-141 Exams

Exam Number/Code: e22-141

Exam Name: emc legato cert networker 7 x specialist

Questions and Answers: 180 Q&As

([Legato Cert](#))

"emc legato cert networker 7 x specialist", also known as e22-141 exam, is a **Exam : [e22-141](#)** EMC certification. With the complete collection of exam questions, Just4Study has assembled to take you through 180 Q&As to your e22-141 exam preparation. In the e22-141 exam resources, you will cover every field and category in EMC Certification helping to ready you for your successful EMC Certification.

The exam questions cover the latest real test and with all the correct answer. we promise the Q&A for EMC Legato Cert e22-141 (emc legato cert networker 7 x specialist) examination of original title complete coverage. e22-141 exam questions help you pass the exam.

Just4Study e22-141 Feature:

* High quality - High quality and valued for the e22-141 Exam: 100% Guarantee to Pass Your e22-141 exam and get your Legato Cert certification.

* Authoritative - Authoritative braindumps with complete details about e22-141 exam.

* Cheaper - Our Just4Study products are cheaper than any other website. With our completed Legato Cert resources, you will minimize your **EMC Legato Cert** cost and be ready to pass your e22-141 exam on Your First Try, 100% Money Back Guarantee included!

* Free - Try free Legato Cert demo before you decide to buy it in <http://www.Just4Study.com>.

Just4Study Guarantee:

Just4Study provides the most competitive quality of all exams for the customers, we guarantee your success at the first attempt with only our Certification Question&Answers, if you do not pass the e22-141 exam at the first time, we will not only arrange FULL REFUND for you, but also provide you another exam of your claim, ABSOLUTELY FREE!

Free e22-141 Demo Download

Just4Study offers free demo for Legato Cert e22-141 exam (emc legato cert networker 7 x specialist). You can check out the interface, question quality and usability of our practice exams before you decide to buy it. We are the only one site can offer demo for almost all products.

The Questions & Answers cover the latest real test and with all the correct answer.we promise the Q&A for **EMC Legato Cert e22-141** examination of original title complete coverage.e22-141 Questions & Answers help you pass the exam. Otherwise,we will give you a full refund.

VUE/Prometric Code: e22-141

Exam Name: emc legato cert networker 7 x specialist(Legato Cert)

Questions and Answers: 180 Q&A

[EMC e22-141](#) Test belongs to one of the Legato Cert certified test, if needs to obtain the Legato Cert certificate, you also need to participate in other related test, the details you may visit the [Legato Cert](#) certified topic, in there, you will see all related Legato Cert certified subject of examination.

Just4Study professional provide Legato Cert e22-141 the newest Q&A, completely covers e22-141 test original topic. With our complete Legato Cert resources, you will minimize your Legato Cert cost and be ready to pass your e22-141 tests on Your First Try, 100% Money Back Guarantee included!

Just4Study Help You Pass Any IT Exam

[Just4Study.com](#) offers incredible career enhancing opportunities. We are a team of IT professionals that focus on providing our customers with the most up to date material for any IT certification exam. This material is so effective that we Guarantee you will pass the exam or your money back.

Exam : EMC E22-141

Title : EMC Legato Cert Networker 7 x Specialist

1. Which three practices can improve performance within a data zone? (Choose three.)

- A. configuring large clients as storage nodes
- B. distributing storage nodes across subnets
- C. configuring an additional NetWorker server
- D. configuring software compression on all clients
- E. configuring large clients as dedicated storage nodes

Answer: ABE

2. The firewall is removed from a data zone. The administrator runs the following command to reset the port range for client flute to Default values:

```
nsrports -C 7937-9936 -S 10001-30000
```

After restarting nsrexecd on the client, a scheduled backup for this client only fails and the following error is given::

Error: Cannot bind socket to service port in configured range on system flute

What is the likely cause of this failure?

- A. The administrator used a wrong command.
- B. The administrator used a wrong port range.
- C. The administrator forgot to restart the NetWorker services on the client.
- D. The administrator forgot to restart the NetWorker services on the server.

Answer: B

3. scanner -v /dev/rmt/1cbn returns the following:

please enter record size for this volume ('q' to quit)

What causes this?

- A. The volume label is corrupted or unreadable.
- B. The volume label is written by a pre-NetWorker 7.x version.
- C. scanner cannot read the volume label because the volume is not mounted.
- D. scanner cannot read the volume label because the volume is not rewound.

Answer: A

4. Storage nodes sn-1(Solaris) and sn-2(Windows) share a tape drive in a DDS environment. A tape has been labeled and written using sn-1. When trying to read the same tape using sn-2, block size errors occur. What is wrong?

- A. Sleep timers are not correctly set.
- B. The tape is labeled with the wrong block size.
- C. The tape is labeled under a different NetWorker version.
- D. The written block size cannot be handled by HBA/SCSI controller on sn-2.

Answer: D

5. What must you do to separate a client's file backups from database backups in a timely way?
- A. Create one Client resource with different save sets and assign it to one group only.
 - B. Create one Client resource with the Save Set All and assign it to two different groups.
 - C. Create two Client resources with different Save Set attributes and assign each client to different groups.
 - D. Create two Client resources with different Save Set attributes and assign their streams to different pools.

Answer: C

6. You have a clustered NetWorker storage node with nodes A and B. What needs to be configured so that a backup on node "A" fails over completely to node B if node A crashes?
- A. Add curphyhost first to the virtual client's storage nodes affinity list.
 - B. Add nsrserverhost first to the virtual client's storage nodes affinity list.
 - C. Add nsrserverhost to the NetWorker server's storage nodes affinity list.
 - D. Add curphyhost to the storage nodes affinity list for each physical client.

Answer: A

7. A volume will be scanned into a new offsite NetWorker server to recover a client. Currently this client does not exist on the new NetWorker server. Which two resources does the scanner command require to exist on the new NetWorker server? (Choose two.)

- A. the original pool
- B. the original group
- C. the original client
- D. the original device

Answer: AC

8. Click the Exhibit button.

The exhibit shows a network after the installation of a second network for backup data traffic. All hostname interfaces on the backup data network have a suffix of -BK.

What happens if the only change made is changing the client's Storage Node attribute to SN-BK?

- A. All backups fail.
- B. All backup data and metadata are sent over the backup network.
- C. None of the backup data or metadata are sent over the backup network.
- D. All backup data, but not the metadata, are sent over the backup network.

Answer: D

9. What are two benefits of a multi-homed NetWorker client? (Choose two.)

- A. Backups are more reliable.
- B. Backups can fail over to a different network.
- C. Backup traffic is offloaded to a second network.
- D. Firewall and some security issues can be avoided.

Answer: CD

10. A tape is brought from another NetWorker server. scanner does not update the client file index, although the Client resource was created on the new NetWorker server. Which two should you check? (Choose two.)

- A. Client ID
- B. Group attribute
- C. client name Aliases
- D. Remote Access attribute

Answer: AC

11. In a directed recovery, the NetWorker server named Bongo is the administering client. Flute is the source client and Clarinet is the destination client. How should the NetWorker administrator configure remote access rights to successfully run the directed recovery?

- A. in Flute's Client Resource Remote Access attribute, list root@Clarinet
- B. in Clarinet's Client Resource Remote Access attribute, list root@Bongo and root@Flute
- C. in Bongo's Client Resource Remote Access attribute, list root@Flute and root@Clarinet
- D. in Flute's Client Resource Remote Access attribute, list root@Bongo and root@Clarinet

Answer: D

12. Where must you have a valid entry if you want to configure a new autochanger at your storage node?

- A. in the server's Device Host list
- B. in the server's Administrators list
- C. in the client's Remote Access list
- D. in the client's Remote User/Password list

Answer: B

13. What is the result of leaving the /nsr/res/servers file empty on a client?

- A. Any NetWorker server is able to initiate a backup of that client.
- B. All backups will fail with the error "Cannot request command execution."
- C. The client can be backed up by any NetWorker server, providing the server resides within the same subnet.
- D. Before a NetWorker server can initiate a save of that client, it is prompted for an administrative user name and password.

Answer: A

14. Which statement is true about the Remote Access All Clients privilege and the Remote Access attribute?

- A. Both must be configured to perform a directed recovery.
- B. The Remote Access attribute is required in cluster environments only.
- C. The Remote Access All Clients privilege overrides the Remote Access attribute.
- D. A user who is already defined as an administrator of the NetWorker server must be included in this attribute.

Answer: C

15. What are two methods used to authorize NetWorker servers Horn and Flute to back up client Tuba with the least security risk? (Choose two.)

- A. Configure nsrexecd to use nsrexecd -s Horn -s Flute.
- B. Remove all entries from /nsr/res/servers file on Tuba and restart nsrexecd service.
- C. Make Flute and Horn the only entries in the /nsr/res/servers file on Tuba and restart nsrexecd.
- D. Stop the nsrexecd service on Tuba and run the command "nsrexecd -i ipaddress_of_Horn -i ipaddress_of_Flute."

Answer: AC

16. You backed up some data on a NetWorker storage node in evaluation mode. The evaluation period expired before you installed the storage node enabler code. Which statement is correct?

- A. You cannot recover the backed-up data to the storage node.
- B. You cannot recover the backed-up data to the NetWorker server.
- C. You can delete the expired storage node license and re-create it using the same code.
- D. You can recover the backed-up data to the storage node if you have a jukebox enabler.

Answer: A

17. Which two commands can you use to recover a single file directly from tape? (Choose two.)

- A. scanner -S ssid devicename filename | uasm -rv
- B. scanner -S ssid devicename | uasm -rv filename
- C. scanner -S ssid devicename | uasm -rv -m source=dest filename
- D. scanner -i -S ssid devicename | rsh client name '(cd destdir; uasm -rv filename)'

Answer: BC

18. Which two conditions are insecure? (Choose two.)

- A. an empty servers file

- B. a Remote Access list of *@*
- C. an empty Remote Access list
- D. a servers file containing only *@*

Answer: AB

19. When reviewing NetWorker logs, it is discovered that someone without proper permissions recovered data previously backed up from a secure file server named Alto. How can access to Alto's backed up data be made more secure?

- A. Remove all entries from the servers file on Alto.
- B. Reduce the number of connection ports on Alto.
- C. Remove all entries from Alto's Remote Access list.
- D. Remove all entries from Alto's Remote User and Password attributes.

Answer: C

20. A NetWorker client and its storage node are in your company's Demilitarized Zone (DMZ). The NetWorker server is behind your firewall. Which type of data should you let pass through the firewall?

- A. jukebox and security data
- B. resource configuration data
- C. backup and recovery save streams
- D. client file index and media database data

Answer: D
